

## Outline

### 1. Purpose of Keio ITC

The purpose of Keio ITC is to provide Keio University with the information platform that it requires, and to promote the development of education and research and the smooth operation of Keio University.

### 2. Main Business Activities of Keio ITC

- Formulating and executing the medium and long-term vision for informatization at Keio University
- Conducting research, development, investigation, and testing related to information platforms
- Developing the information platform while managing and establishing rules for its administration
- Developing, operating, and maintaining the systems related to education, research, and management

## History

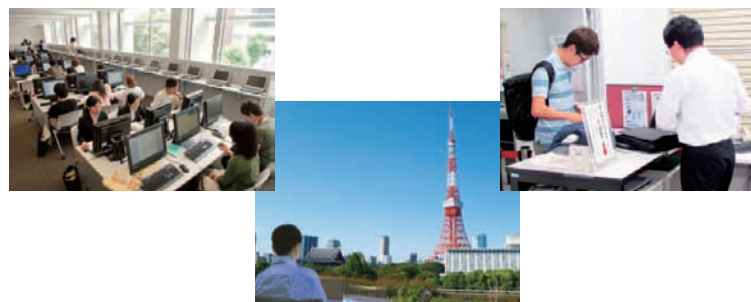

|          |   |
|----------|---|
| APR 1969 | Establishment of Keio Institute of Information Science                                  |
| OCT 1979 | Start of the Keio University Computer Center  |
| APR 1993 | Start of Keio University MediaNet (Media Center)  |
| APR 1996 | Installation of Keio Information Super Highway (Inter-campus Network)                   |
| FEB 1999 | Start of Keio University Information Technology Center                                  |
| MAR 2003 | Starts operating ITC Integrated Printing System   |
| JUL 2004 | Start of Keio Information Technology Center   |
| MAR 2005 | Starts operating Keio Single Sign-on System   |
| SEP 2010 | Starts operating ITC system (ITC accounts)  |
| OCT 2014 | Starts operating Keio University Academic Access Management Federation (GakuNin) System |

### Keio Single Sign-on System (keio.jp)

Keio Single Sign-on System eliminates the inconvenience of having to manage multiple IDs. Availability of applications is based on the needs of the target user, which depend on the attributes of a user's account.

#### Applications ITC provides

|  |   |
|--|---|
| <b>Keio Mail</b> .....                       | A university-wide email system using Gmail                                  |
| <b>Class Support</b> .....                   | Provision of study materials and reports, notifications etc. in class units |
| <b>Network Access Authentication</b> .....   | Use of network on campus  |
| <b>Obtaining software licenses</b> .....     | Contract license distribution system  |
| <b>Authenticated Streaming Service</b> ..... | Online training for software programs                                       |
| <b>Minutes System</b> .....                  | Prepares, corrects and views minutes  |
| <b>File Sharing System</b> .....             | Shares files among faculty members  |
| <b>KnowledgeDeliver</b> .....                | E-learning system   |

Keio University

**NODERA, Takashi**

Professor, Faculty of Science and Technology

All our activities in society as well as our social infrastructure are supported by information technology. We live in a digital world. This isn't a choice, but the reality of the 21st century. This digital world we live in, changes constantly, and with it the knowledge, technology, systems and skills required of its inhabitants, need to be updated. Digital technology in particular, helps people live their lives in new ways, with technologies that never before existed. Yet, on the other hand, it also creates change in the behavioral patterns of individuals, as well as in social systems. We find ourselves both excited, and frightened, by this digitized world. And because we do live in a digital world, communicating face-to-face in a way not really possible in cyberspace has become all the more important.

In 1999, Keio University established the Information Technology Center (ITC), in order to further the introduction and application of information technology. Since then, the Center has provided the digital world with various information system environments. This covers areas such as network environments with adequate information security, information services, and administrative and business management. What we must not forget, is that these too, extend initiatives aimed at bringing about a new, safe and relevant information environment, with mechanisms and services that facilitate communication by its users, at the many and varied crossroads of exchange we encounter in both the digital and real world.

**ITC service****Computer and Network****ITC Account and SFC-CNS Account**

You can use an ITC account to use PCs, printers, networks, etc. installed on each campus. And on the Shonan Fujisawa Campus, you use a SFC-CNS account.

**Integrated Printing System**

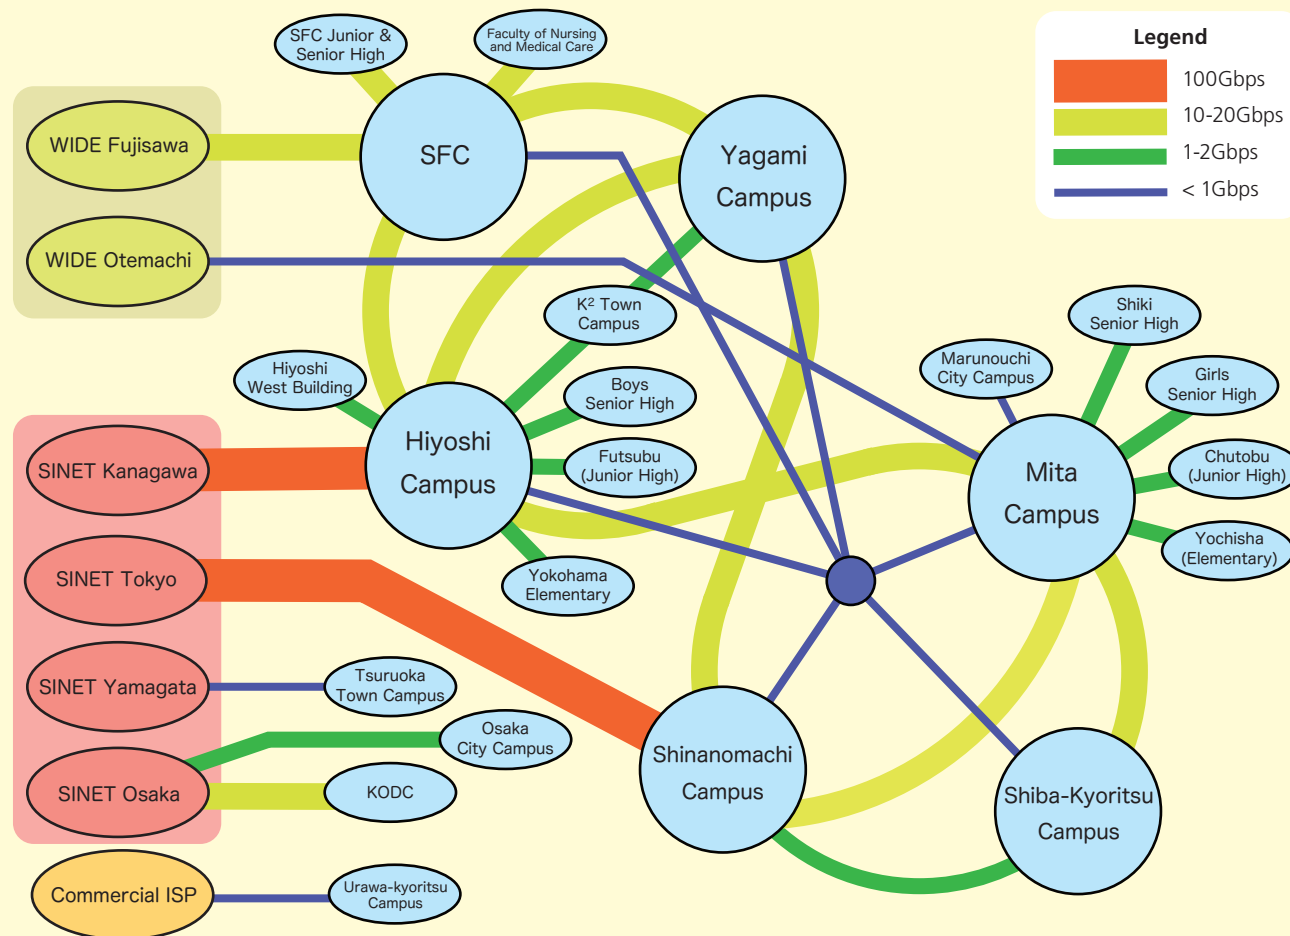

You can request printing from a PC installed on any campus or a PC in your home, and have it printed at any printer you choose installed on the campus. When printing, you settle accounts using your IC card used for paying transportation fares.

**Network Connection**

At Keio, you can use wired LAN connection and wireless LAN (WiFi) connection services. And you can use eduroam (international wireless LAN roaming service).

**Keio Intercampus Network**

2016.04.01

**Software and GakuNin System****Software**

Keio University has contracted site licenses for office software, image editing software, numerical processing software, statistical analysis software, plagiarism prevention software, OS, and others which it supplies to students and faculty in order to develop educational and research activities.

**GakuNin System**

Keio University Academic Access Management Federation (GakuNin) System allows you to use services compatible with GakuNin by logging in using your Keio account. It provides e-journals, e-learning systems, file sharing systems, and software development tools and other services.

**User Support****Help Desk**

Services that ITC provides include not only preparing various user manuals; it has also set up user consultation counters for students and faculty to resolve users' problems.

**Rental PCs**

At the Mita, Hiyoshi, Shinanomachi, and Shonan Fujisawa Campuses, students can rent a note-PC. The rental PC permits the use of many kinds of software that Keio University has licensed.

**Public Relations Activities**

ITC not only actively supplies information about the provision of the information environment, but about information security and copyright protection, mainly for each year's new students and newly appointed faculty.
